

Concast Environmental Policy

Concast Precast Group designs, manufactures and erects precast concrete structural components operating at Hazelhatch, Newcastle, County Dublin.

Concast use secondary sourced aggregates in our concrete, recycle water, recycle steel reinforcement and we also use cement substitutes in our precast concrete wherever possible in our efforts to minimise our impact on scarce resources

We recognise that each activity, product and service that we provide has a potential impact on the environment and the local community. Our objective is to minimize the environmental impacts and where practicable provide environmental benefit. Concast believes that a balance must be struck between desirable development and the protection of the environment.

The company is committed to compliance with existing legislation, prevention of Pollution and continuous improvement of environmental management.

To ensure that environmental impacts are controlled and minimized and that our objectives and commitments are achieved we have established and will maintain an Environmental Management System

The company intends to play its part by continually seeking ways to prevent pollution and minimise the effects of its Plants, offices and site based activities on the environment.

This system is part of the overall management system for the site and will enable us to provide materials and services to society in a manner, which ensures that we meet our environmental obligations.

A handwritten signature in blue ink, appearing to read "B. Quinn", written over a horizontal line.
